EXPERIENCE

Omega 365 Solutions

Sep. 2024 – Present

Developer (Part-time)

Bergen/Stjørdal, Norway

- Sole developer on a document-review plugin in the BIM module that links platform documents to specific objects in a 3D viewer and visualises geometry changes between revisions through colour-coded overlays, helping reviewers see exactly what an updated document refers to and what changed.
- Reimplemented existing functionality from a legacy jQuery/HTML/CSS stack into Omega 365's Vue-based environment, with significant in-house tooling, and shipped the new version to production used by enterprise clients.
- Work across the full stack in Vue.js, TypeScript, and SQL, participating in code review and iterative delivery on a shared codebase.

Summer Intern

Jun. 2024 – Aug. 2024

- Designed and built a fully functional Vue.js web application end-to-end during the internship, alongside an intensive program in SQL and database design.

Norway's Best

Aug. 2019 – Aug. 2023

IT Technician (Apprentice & Seasonal)

Flåm, Norway

- Maintained critical IT infrastructure across multiple sites, payment systems, hotel management systems, networks, and servers. Diagnosing issues under time pressure to minimise downtime for staff and guests.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java

Frameworks & Libraries: Vue.js, SvelteKit, TensorFlow/Keras, HuggingFace Transformers, Three.js

Tools & Platforms: PostgreSQL, Supabase, Git, Weights & Biases

Spoken: Norwegian (native), English (fluent)

PROJECTS

Geography Quiz App | *SvelteKit, Supabase, PostgreSQL, Three.js / globe.gl*

In Development

- Building a quiz platform around an interactive 3D globe with country-polygon rendering, LOD switching, and bounding-box culling for smooth performance at scale.
- Designed the underlying PostgreSQL schema from scratch with extensibility as a first-class concern: a single dynamic structure supports multiple quiz types, configurable question formats, hierarchical topic categories, and per-user progress tracking, built so new quiz domains can be added without schema changes.

Transformer-Based QA System | *Python, TensorFlow/Keras, HuggingFace, W&B, Gradio*

[GitHub](#)

- Built an encoder-only Transformer from scratch for extractive QA on SQuAD 1.1, implementing multi-head attention, sinusoidal positional encoding, Pre-LN architecture, and a shared dense span-prediction head.
- Iterated through 25+ logged training runs, debugging tokenisation (BertTokenizerFast with offset mapping), attention masking, and architecture trade-offs (Pre-LN vs. Post-LN, Adam vs. AdamW, warmup/decay schedules).
- Custom 56M-parameter model reached ~16% F1; established a DistilBERT fine-tuning baseline at ~69% F1 on 3k examples, quantifying the practical value of pre-training. Deployed via Gradio on HuggingFace with side-by-side GPT-3.5 comparison.

Scrollytelling Article for Studvest | *Voluntary web development for a student newspaper*

[Live](#)

- Built an interactive long-form article combining scroll-driven animation with editorial content, published on the student newspaper's special-features site.

EDUCATION

Norwegian University of Science and Technology (NTNU)

Aug. 2025 – Jun. 2027 (expected)

M.Sc. Computer Science, Artificial Intelligence

Trondheim, Norway

Western Norway University of Applied Sciences (HVL)

Aug. 2022 – Jun. 2025

B.Eng. Computer Engineering, Machine Learning and Artificial Intelligence

Bergen, Norway
